Clinical Series

This advanced clinical training program is designed for dentists who want to learn how to perform predictable smile makeover for their patients. In this 2-days of lecture and clinical training that will be conducted on two separate days and generally 15 days apart, the clinician will learn how to identify what looks good and what needs to be improved by learning the principals of smile design followed by over-shoulder observation of an actual case on a live patient. The live clinical program will be both for preparation and insertion of veneers. The participant will learn the following during the program:

Day 1

- ◆ Understanding the Principal of Smile Design
- ◆ Review of Preparation Guidelines
- ◆ Patient Consultation and Selecting a new Smile
- ◆ Painless Anesthesia and Use of Anti-Anxiety Agents if necessary
- ◆ Understanding about Golden Proportion and Pre-Preparation of Models
- ◆ Use of Diagnostic Wax up for Predictable Treatment
- ◆ Use of Putty Matrix as a preparation reduction guide and fabrication of provisionals
- ◆ Soft tissue alignment prior to veneer preparation
- ◆ Preparation of teeth in relation to gingival zenith
- ◆ Impression taking and accurate bite and midline registration
- ◆ Photography for Lab Communication and Shade Selection
- ◆ Building Prototype Temporaries using Diagnostic Wax up
- ◆ Lab Communication and Color Mapping
- ◆ Occlusal Adjustment with Provisionals

Day 2

- ◆ Removal of Provisionals and Disinfecting Preparation
- ◆ Preparation of Inner Surface of Porcelain for Bonding
- ◆ Placement of Rubber Dam for Crown/Veneer Replacement
- ◆ Preparation of Teeth for Bonding and review of Bonding Materials
- ◆ Bonding of Teeth using Resin Cements
- ◆ Final Adjustment and Cronoplasty

The participants are guaranteed to learn all they need to know to predictably prepare 8-10 anterior teeth and begin to build a great reputation in offering exceptional cosmetic dentistry for their patients.
